

Screen Smarter with Clear Investigative Advantage

TECHNOLOGY

CIA utilizes the latest technology to exchange up-to-date information and ensure prompt turn-around.

COMMITMENT

CIA adapts to meet our clients' needs and is always available for a consultation to ensure we are providing the best service.

SOLUTIONS

CIA offers customizable packages and pre-set instruction ordering for simplicity and efficiency. For a well-rounded solution, check out our Four Step Process.

SECURITY OF INFORMATION

CIA Uses 6 Levels of Protection to Secure Online Data

- All orders are requested and sent back via 128-bit SSL encryption, secured by a security certificate from www.comodo.com.
- Our network is protected from the outside via CISCO ASA 5505 firewalls, and only accessed remotely via HTTP, HTTPS, and SMTP (email) protocols. All other ports are blocked.
- Our inside network is protected via Windows 2003 Enterprise Servers, with redundancy, and offsite backup.
- The data is protected and encrypted in Lotus Domino servers, and replicated offsite to a secure location with another CISCO ASA 5505 firewall.
- We limit access to sensitive data inside our office by encrypting all the way down to field level on certain things like credit card numbers and social security numbers, and only allow access to those who need the information.
- Virtually no information is printed at our office, which helps avoid any paper with names and social security numbers accidentally getting into the wrong hands. If we do print anything, it's shredded immediately after faxing.
